

BARVEILY JOANABETH V. ENGCO

SOFTWARE DEVELOPER

+639998276213 barveilyengco1214@gmail.com Sta. Ana Manila  [Barveily Engco](#)

PROFESSIONAL SUMMARY

Software Developer specializing in backend development with full-stack capabilities, experienced in building scalable SaaS platforms, payment gateway integrations, and RESTful APIs using Laravel, Node.js, and Python. Capable of contributing across the stack with frontend experience in React and Angular, with a primary focus on backend architecture, system design, and API integration.

TECHNICAL SKILLS

Backend: Laravel, Node.js (Express), Filament, AdminJS, Django	Frontend: Angular, React
Databases: MySQL, MariaDB, PostgreSQL	Cloud & Storage: AWS (S3)
Languages: PHP, JavaScript, TypeScript, Python	DevOps & Tools: Git, CI/CD, Docker, SSH
Architecture: RESTful APIs, API Integration, System Design	AI Tools: Cursor AI, GitHub Copilot, Claude AI

PROFESSIONAL EXPERIENCE

Backend-Web Developer (Full-time)	June 2024 - Present
Smartech Solutions Philippines Incorporated	Boni, Mandaluyong

- Led end-to-end SmartPay payment gateway integration across multiple enterprise platforms (event management, tourism booking, LGU systems, and Worker's ID issuance), integrating payment APIs and webhook/postback handling for real-time transaction processing and synchronization across diverse client environments.
- Architected and delivered multiple SaaS platforms including an Event Management Platform (Node.js, React, AdminJS) and Tourism Booking Platform (Laravel, Filament), designing multi-tenant architecture, scalable backend systems, and database structures for enterprise and LGU use cases.
- Developed a Worker's ID Issuance System integrated with SmartPay, implementing QR code generation, approval workflows, and payment processing for seamless end-to-end digital issuance at scale.
- Maintained and enhanced multiple legacy production systems (Event Management Platform and Barangay Information System), consistently delivering feature updates, bug fixes, and stability improvements post-deployment.
- Led backend modernization by successfully migrating core services from Node.js (Sequelize) and Lumen to Laravel, significantly improving maintainability and long-term scalability.
- Designed scalable RESTful APIs using Laravel, Lumen, Node.js, and Python, reliably supporting high-volume transactions, QR workflows, payment processing, and authentication integrations.
- Built a Python automation tool to process Excel datasets and convert AWS S3-hosted QR images from JPG to PNG, notably reducing manual processing time and improving operational efficiency.
- Leveraged AI-assisted development tools (Cursor AI, GitHub Copilot, Claude) to consistently improve development speed and code quality across projects.

Web Developer (Intern-OJT)	Feb 2024 - May 2024
Circuit Solutions, Inc.	Ortigas Center, Pasig

- Developed a proof-of-concept Android app with offline face recognition using Java (Android Studio) and a Python Flask API for face recognition processing and integration.
- Implemented remote time-in/time-out system with geolocation and facial verification for CSI and retail use cases to enable secure attendance tracking.
- Built Laravel backend APIs for mobile data processing, PDF generation with digital signatures, and integration with existing company APIs for remote time tracking.

EDUCATION

Bachelor of Science in Information Technology

Pamantasan ng Lungsod ng Maynila (Magna Cum Laude) | 2020-2024

PROJECTS

Cressential: Blockchain-based Academic Record Issuance and Verification System

Role: Backend Developer | Sep 2023 | Capstone Project

- Contributed to the development of a secure academic record system using Blockchain and Smart Contracts to improve credential verification integrity
- Developed full-stack features using React.js, Node.js (Express.js), and PostgreSQL for system functionality and data management
- Led integration of Smart Contracts with React and Node.js, enabling blockchain-based storage and verification of academic records

DonBentory: Web-based Inventory System with Demand and Sales Forecasting

Role: Backend Developer | Apr 2023 | System Integration & Architecture Project

- Contributed to the development of an integrated inventory and POS system with sales and demand forecasting features
- Developed machine learning models using Python and Jupyter Notebook for demand and sales prediction, including data cleaning and training
- Integrated the ML forecasting model into the system via Flask API, and connected it with a Laravel backend for deployment.
